

Show the updated visual workflow

Show the communication gap, then explain the transformation from walkthrough to useful context.

Key points

- Text and screenshots arrive as disconnected clues
- Video contains more data than the useful moments require
- JesSee keeps narration and visual evidence together

Walkthrough

1. Frame the communication problem

Text, screenshots, and video each lose a different part of the explanation.

OPEN SOURCE BY POLYFORM

Show the work once.

Leave with a playbook.

JesSee turns a narrated screen walkthrough into a clear, image-backed PDF—so people and AI can understand what happened without piecing together a prompt, five screenshots, and a long video.

Update the product image

A clear outcome, the exact steps, and the visual evidence that proves each one.

01Open image settings

02Choose the replacement

03Confirm the new state

2. Show what gets lost

The problem becomes concrete before JesSee introduces the solution.

JesSee - The communication gap

01THE COMMUNICATION GAP

AI can read the words.

It can inspect the image.

But it misses the explanation between them.

Most product communication arrives as disconnected clues. A prompt says one thing. A screenshot shows another moment. A video contains the whole story, but asks a person to scrub through it—and gives an AI far more data than the useful moments require.

02

03

Text loses the screen

You write paragraphs describing a state the reader still cannot see.

Screenshots lose the why

You upload several images, then rebuild their order and meaning by hand.

Video keeps too much

The answer is buried inside every pause, detour, and unimportant frame.
